SUMMARY

Full-stack software engineer with an IT root-cause analysis background, experienced in engineering full-stack applications across Java, Spring Boot, SQL, and React. Bridges development and quality engineering by automating REST API test suites, benchmarking system throughput and latency, as well as leveraging AI tools to generate edge-case test coverage. LaunchCode Full-Stack graduate committed to delivering robust code and continuous system stability.

SKILLS

Languages and Frameworks: Java, JavaScript, SQL | Spring Boot, Spring Data JPA, React.js
Testing and Performance: REST API Testing, Postman, JUnit, JMeter, Maven, CI/CD Integration
Tools and Platforms: Git, Docker, MySQL, PostgreSQL, GitHub Copilot, Hermes Agent

EXPERIENCE

Builder's Box — LaunchCode Capstone Project

- Implemented automated unit and integration test suites using JUnit executed via Maven (mvn test), validating service-layer business logic, JPA persistence rules, and edge cases prior to build packaging.
- Designed a MySQL schema enforcing relational integrity between components (items) and complete builds (groupings).
- Executed service-level load tests with JMeter to measure endpoint throughput and response latency under simulated concurrent traffic, ensuring stable read/write cycles against MySQL.
- Configured GitHub Actions CI/CD workflows to execute automated Maven test suites on every push and pull request, preventing regressions and enforcing code quality before build packaging.

Freelance Full-Stack Software Engineer — KC Optimal Computing LLC
August 2025 - Present

- Designed and deployed end-to-end web applications (React, TypeScript, Next.js frontend; Node.js and Python backends) supporting three active mission-driven organizations.
- Partnered with local nonprofits to deliver open-source AI and automation, eliminating SaaS costs and saving partners an estimated $1,500 annually.
- Integrated schema validation and automated API contract checks across custom integrations, catching data format mismatches prior to client handoff.

IT Supervisor — Elevate Missouri
March 2020 - Present

- Designed a low-cost, offline-capable timekeeping solution for Swipeclock kiosks via API, reducing missed punches by 42% and saving 2.5 hours of weekly admin overhead.
- Conducted root-cause analysis on recurring system, hardware, and network incidents across multi-site facilities, isolating underlying failure patterns to implement permanent fixes that minimized downtime.

EDUCATION

LaunchCode, Full-Stack Software Development, 2026
MDHEWD Coursera, Google AI, 2026 | Google Data Analytics Professional, 2026 | Google IT Support, 2025
freeCodeCamp, Web Design, 2024 | Python, 2024 | JavaScript, 2025 | C# with Microsoft, 2026
