SUMMARY

I am a full-stack software engineer with a background in IT root-cause analysis who builds production applications in Java, Spring Boot, React, JavaScript, TypeScript, Node.js, Python, and SQL. As a LaunchCode Full-Stack alumnus and an incoming certified Agentic Engineer through Hire-Human, I design reliable systems by automating REST API testing and CI/CD pipelines. I apply multi-agent orchestration, the Model Context Protocol, and prompt engineering to increase edge-case coverage and accelerate development. Google certifications in AI, Data Analytics, and Business Intelligence enable me to deliver AI and data workflows that produce measurable results for nonprofits and small organizations. My goal is to write robust, maintainable code that solves operational problems.

SKILLS

Languages and Frameworks: Java, JavaScript, TypeScript, Python, SQL, Spring Boot, React.js
Testing and Performance: REST API Testing, Postman, JUnit, JMeter, Maven, CI/CD Integration
Tools and Platforms: Git, Docker, MySQL, PostgreSQL, GitHub Copilot, Claude

EXPERIENCE

Freelance Full-Stack Software Engineer — KC Optimal Computing LLC
August 2025 - Present

- Designed and deployed end-to-end web applications (React, TypeScript, Next.js frontend; Node.js and Python backends) supporting three active mission-driven organizations.
- Partnered with local nonprofits to deliver open-source AI and automation, eliminating SaaS costs and saving partners an estimated $1,500 annually.
- Integrated schema validation and automated API contract checks across custom integrations, catching data format mismatches prior to client handoff.

IT Operations Supervisor — Opes Companies
March 2020 - October 2026

- Designed a low-cost, offline-capable timekeeping solution for Swipeclock kiosks via API, reducing missed punches by 42% and saving 2.5 hours of weekly admin overhead.
- Conducted root-cause analysis on recurring system, hardware, and network incidents across multi-site facilities, isolating underlying failure patterns to implement permanent fixes that minimized downtime.

Web Developer — Project Happiness
January 2025 - February 2026

- Designed, implemented, and maintained the organization website based on stakeholder and board feedback, optimizing cross-device responsiveness for improved usability.
- Enhanced SEO through meta and Open Graph tags and technical best practices while providing ongoing support for UX/UI and payment processing issues.
